This screenshot shows a software interface for managing products and components. The left sidebar contains navigation icons for Home, Products, Platforms, Components, Licenses, Organization, and Inbox. The main area has tabs for Products, Components, and Documents.

Products Tab:

- Product List:** Shows two items: Product1 and Product2.
- Product Detail:** A modal for Product1 displays fields for Id (Placeholder), Name (Placeholder), Version (Placeholder), URL (Placeholder), and Vendor (Placeholder).
- File Upload:** A cloud icon with an upward arrow and a "DRAG & DROP" message.

Components Tab:

- Component Categories:** A grid of colored boxes representing categories: format: source (red), format: compiled (orange), dependency: optional (yellow), dependency: mandatory (green), delivery: internal (light green), delivery: distribute (light blue), usage: local-call (light orange), usage: remote-call (light yellow), communication: p (light green), communication: s (light blue), bundling: standalone (light orange), bundling: embedded (light yellow), artifact: pristine (light green), and artifact: modified (light blue).
- Component Selection:** A 4x10 grid of small colored squares for selecting components.
- Add Component:** A red "Add" button.

Documents Tab:

- Document List:** Shows three documents: Doc1 (Evaluation), Doc2 (Evaluation), and Doc3 (Report).
- File Upload:** A cloud icon with an upward arrow and a "DRAG & DROP" message.

Bottom Right: A red "Save" button.

Use-Type Group	Use-Type	Use-Type Description	Use-Type Example/Hint/Association
FMT	format: source	component is provided in pristine source format	WEB-INF/query.js
	format: compiled	component is provided in compiled/converted/compressed format	com/example/foo.class
DEP	dependency: options	component is loaded on demand and product would reasonably work without it	IDB driver
	dependency: mandatory	component is loaded/linked dynamically/statically and product does not function without it	Hibernate ORM
DLV	delivery: internal	component is used internally without distribution to other legal entities (e.g. built-time components)	Gradle/Ant/Maven
	delivery: distributed	component is distributed to other legal entities (e.g. run-time components)	lib/example-1.2.3.jar C:\Applications\example\example.jar
USG	usage: local-call	component (via product) is locally called for execution	service.example.com:1234
	usage: remote-call	component (via product) is remotely called for execution (SaaS)	component_function()
COM	communication: process	component is called from product via direct in-process mechanism (function call, dispatch table, etc)	/var/run/component.sock
	communication: system	component is called from product via system/network service (pipe, socket, dgram, execve, etc)	example-1.2.3.jar product-1.2.3.ear/example-1.2.3.jar
BND	bundling: standalone	component artifacts still provided fully standalone and recognizable as such	example-1.2.3.jar product-1.2.3.ear/example-1.2.3.jar
	bundling: embedded	component artifacts embedded into product and/or not obviously recognizable	
ART	artifact: pristine	component artifacts are all as-is, i.e. exactly as originally received from upstream vendor	example-1.2.3.jar/com/example/foo.class
	artifact: modified	component artifacts were added/replaced/removed	example-1.2.3.jar/com/example/adon.class

legal entities (e.g. run-time components)

Bundling

Licence condition depends on the format in which
the component ist provided to the customer

 Standalone

relevant if component artifacts still provided

 Embedded

relevant if component artifacts embedded
into product and/or not obviously

Artifact

Licence condition depends on the format in which
the component ist provided to the customer

 Pristine

relevant if component artifacts are all as-is,

 Modified

relevant if component artifacts were added/
replaced/removed

DRAG & DROP
your files to assets, or [browse](#)

Use-Type Group	Use-Type	Use-Type Description	Use-Type Example/Hint/Association
FMT	format: source	component is provided in pristine source format	WEB-INF/query.js
	format: compiled	component is provided in compiled/converted/compressed format	com/example/foo.class
DEP	dependency: optional	component is loaded on demand and product would reasonably work without it	JDBC driver
	dependency: mandatory	component is loaded/linked dynamically/statically and product does not function without it	Hibernate ORM
DLV	delivery: internal	component is used internally without distribution to other legal entities (e.g. built-time components)	Gradle/Ant/Maven
	delivery: distributed	component is distributed to other legal entities (e.g. run-time components)	lib/example-1.2.3.jar
USG	usage: local-call	component (via product) is locally called for execution	C:\Applications\Example\example.ejar
	usage: remote-call	component (via product) is remotely called for execution (SaaS)	service.example.com:1234
COM	communication: process	component is called from product via direct in-process mechanism (function call, dispatch table, etc)	component_function()
	communication: system	component is called from product via system/network service (pipe, socket, dlsym, execve, etc)	/var/run/component.socket
BND	bundling: standalone	component artifacts still provided fully standalone and recognizable as such	example-1.2.3.jar
	bundling: embedded	component artifacts embedded into product and/or not obviously recognizable	product-1.2.3.ear/example-1.2.3.jar
ART	artifact: pristine	component artifacts are all-as-is, i.e. exactly as originally received from upstream vendor	example-1.2.3.jar!com/example/foo.class
	artifact: modified	component artifacts were added/replaced/removed	example-1.2.3.jar!com/example/addon.class
